

Cone catcher

Designation

Cone catcher is designed for retrieving different pieces from the bottom (cones, pads, junk iron etc.). Cone or other pieces are drilled round by core bit and are pushed inside the catcher body by the core. When pulling off bottom the collet and spring-finger core catcher catch the core which hold the cone inside the catcher body.

Technical characteristics

Core bit OD, mm	210
Core bit ID, mm	140
Body OD, mm	172
Cutting structure	Carbide inserts
Tool joint GOST 28487-2018, box	Z-133
Height, mm	1700
Weight, kg	120

Identification example

SHL-210/140

SHL - Cone catcher

210 - Outside diameter

140 - Inside diameter

Operating parameters are typical for the bit type specified in general applications. For recommendations on your specific application, please contact a "BURINTEKH", Ltd representative.
